Visitor Management Software (VMS)

visitor management software offers organizations a modern, efficient, and secure way to manage and monitor the flow of visitors into their facilities. It helps improve security, compliance, and the overall visitor experience while reducing administrative tasks associated with visitor registration. Different software providers offer various features, so organizations can choose a solution that aligns with their specific needs and requirements.

The purpose of visitor management software is to efficiently and securely manage visitors entering a business, organization, or facility. It serves several key purposes:

1. **Enhanced Security:** Visitor management software helps enhance the security of a facility by tracking who enters and exits, which can be critical for ensuring that only authorized individuals gain access. It can also check visitors against watchlists or databases to identify potential security threats.

2. **Improved Safety:** In addition to security, visitor management systems can contribute to safety by keeping a record of who is in the building at any given time. This can be essential for emergency evacuations or contact tracing during health crises.

3. **Efficiency:** Visitor management software reduces the administrative burden associated with manual visitor registration and tracking. This frees up staff time for other tasks and can help organizations operate more efficiently.

4. **Compliance:** Many industries and organizations are subject to regulatory requirements that mandate visitor tracking and record-keeping. Visitor management software helps ensure compliance with these regulations by automatically maintaining visitor records.

5. **Professional Image:** Using modern technology for visitor registration conveys a professional image of the organization. It shows that the organization values security, efficiency, and the visitor experience.

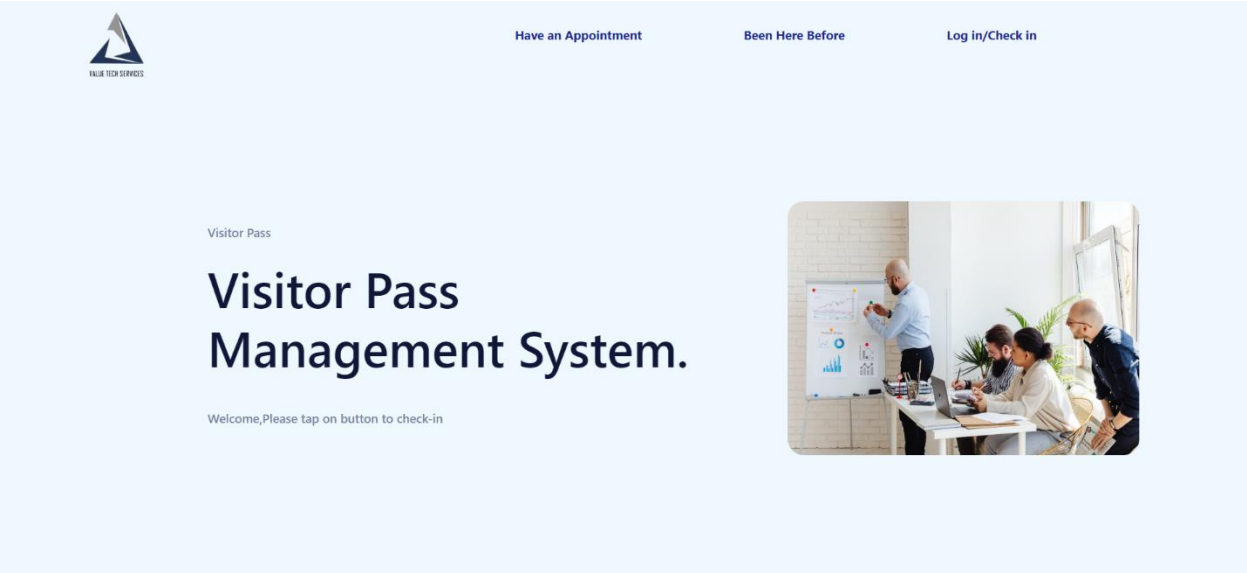
6. **Data Analysis:** The data collected by visitor management systems can be analyzed to gain insights into visitor patterns, peak visit times, and other valuable information. This data can be used to optimize staffing, security measures, and facility layouts.

7. **Access Control Integration:** Some visitor management solutions integrate with access control systems, allowing authorized visitors to access specific areas or receive temporary access credentials.

8. **Visitor Accountability:** By providing visitor badges or passes, the software holds visitors accountable for their actions during their stay and helps identify them in the event of any incidents.

9. **Visitor Experience:** A smooth, organized check-in process contributes to a positive visitor experience, which can be especially important for businesses focused on customer service or organizations hosting events or conferences.

❖ Here is a Home Page of visitor management software.

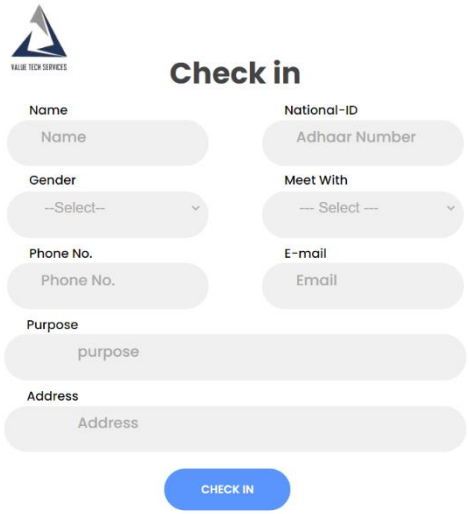


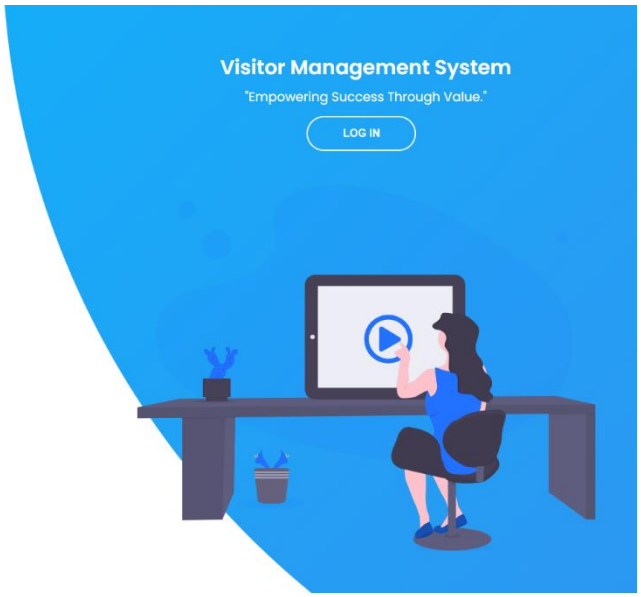
- On this page, you'll find three options:-

a) Schedule an Appointment
b) Previous Visits Log
c) Log In/Check In

- When you click on the 'Log-in/Check-in' option, an animated page opens. Upon selecting the 'Check-in' option on the left side of this page, a corresponding section or page is displayed below

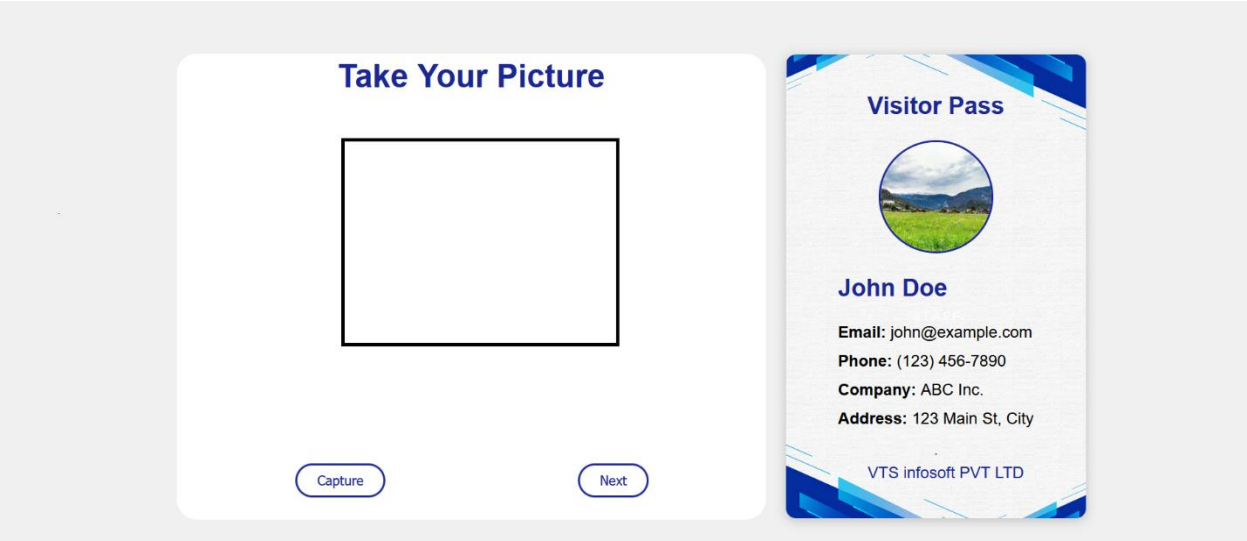
❖ Here is a Check-in Form





- In this page, please fill in the required details, including your Name, National ID (Aadhar Card No), Gender, the person you wish to meet (Meet With), Phone Number, Email, Purpose of your visit, and Address. Once you have completed the form, click the 'Check-in' option. After clicking 'Check-in,' the webcam page will open.

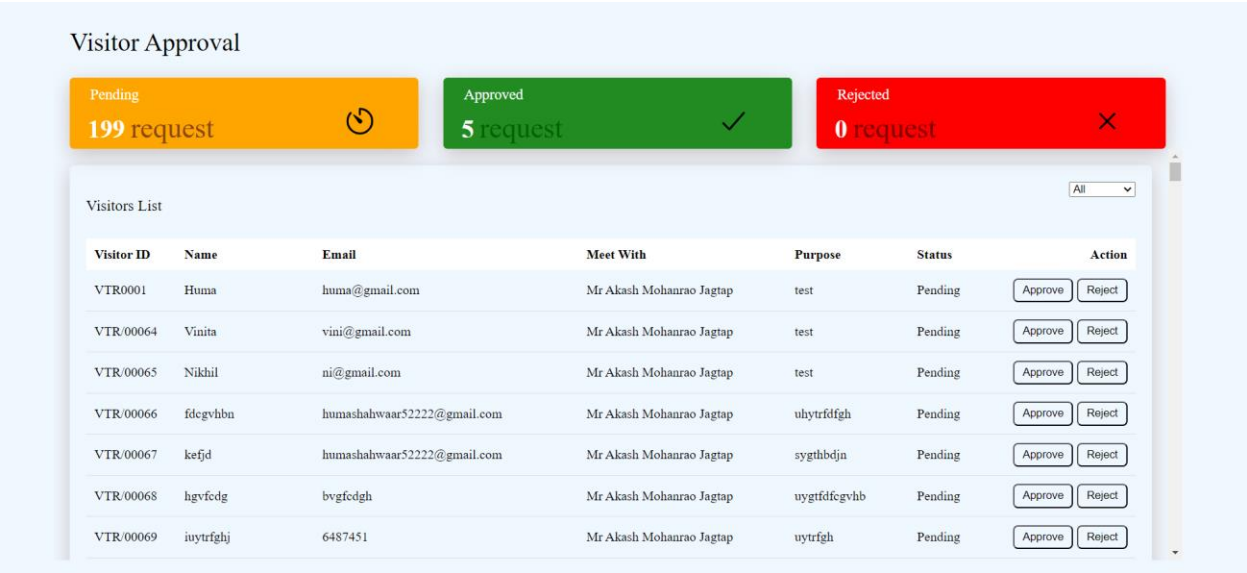
❖ Here is a Webcam page



- Here you can captured image of an visitor .

- After this process, an email is generated and sent to the intended person, notifying them of the visitor's presence and desire to meet.

❖ Here is a Approval page

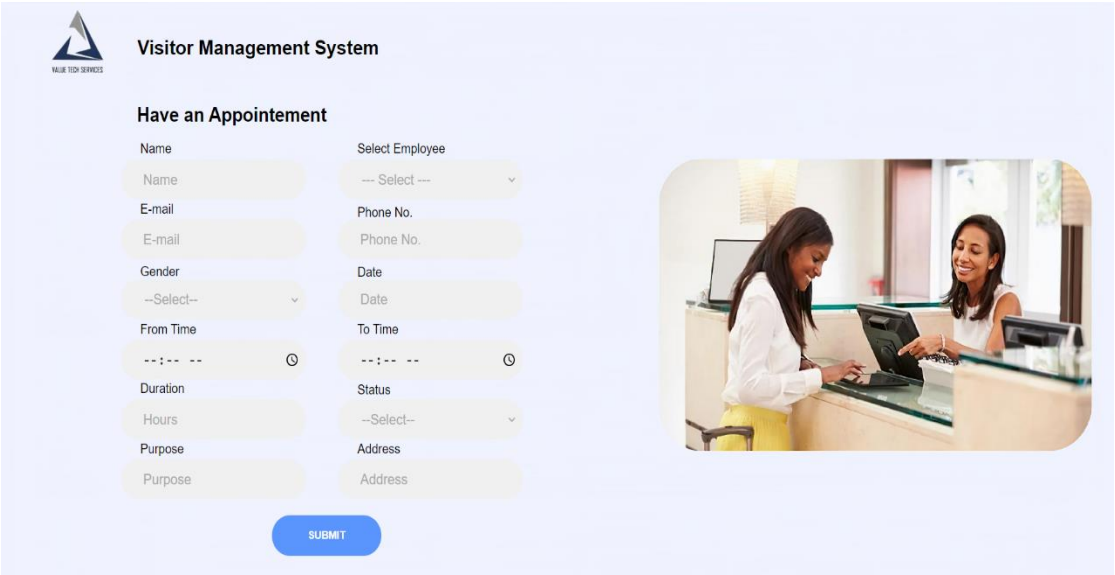


- Once the employee approves the visitor, the individual is granted permission to meet with the designated person from this page.

- On this page, 'Pending' displays the number of pending requests, 'Approved' indicates the total number of approved requests, and 'Rejected' shows the count of rejected requests.

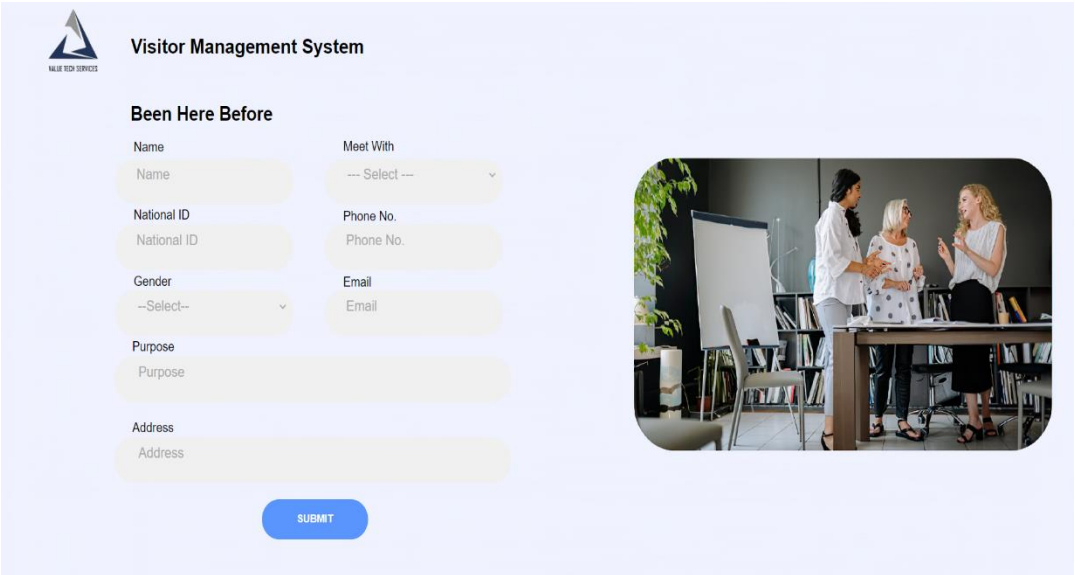
- The list below represents the Visitor List, where requests can be approved or rejected. Once any action, be it approval or rejection, is performed, the respective buttons are disabled to prevent further actions. Subsequently, an email notification is sent to the visitor informing them of the approval or rejection.

❖ Here is Have an Appointment Page.



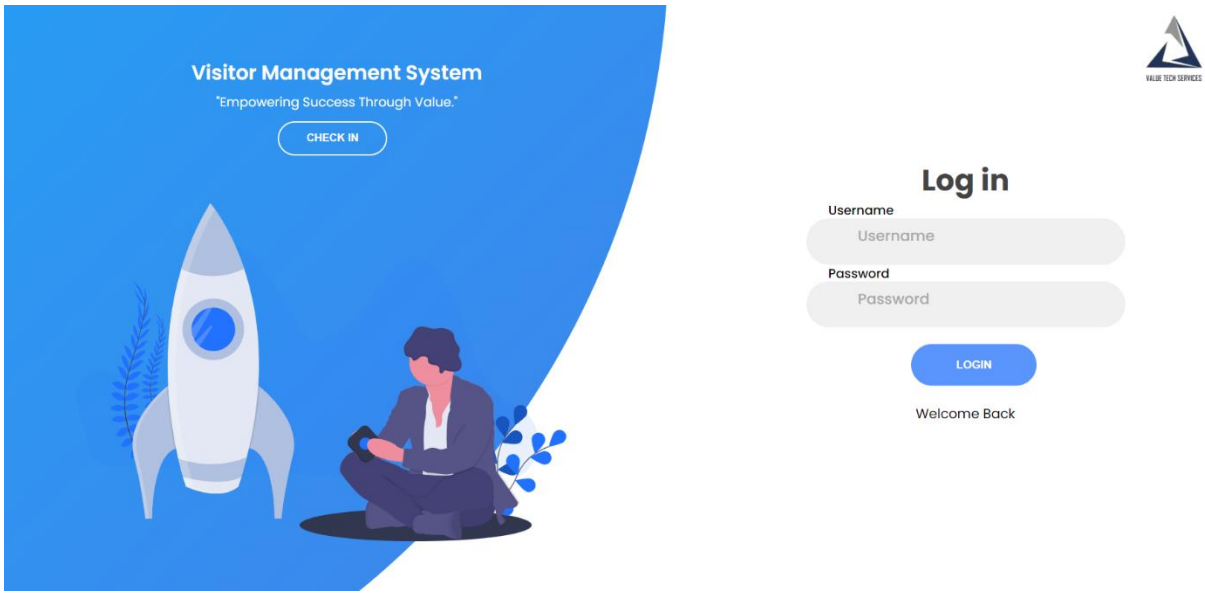
- This is the appointment page where you can enter basic information. After completing this step, the visitor will receive an email confirming the successful booking of their appointment.

❖ Here is Been Here Before



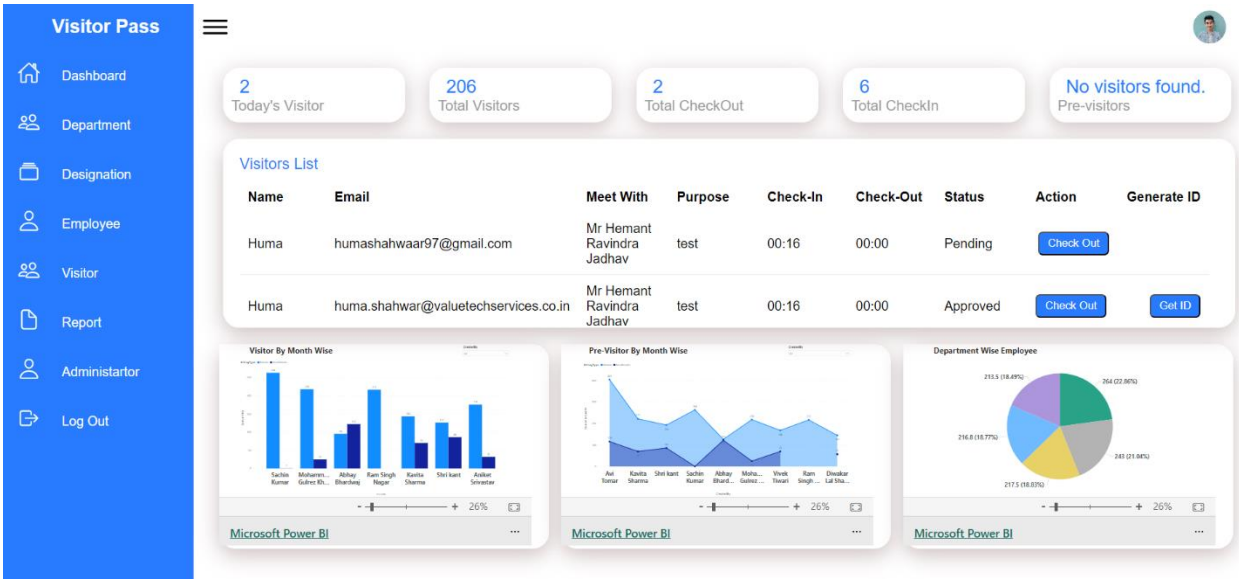
- This page is designed for returning visitors. You can enter their mobile number to retrieve all relevant information and provide details about the purpose of their visit.

❖ Here is a login page



- Here, you can input your user ID and password to log in.

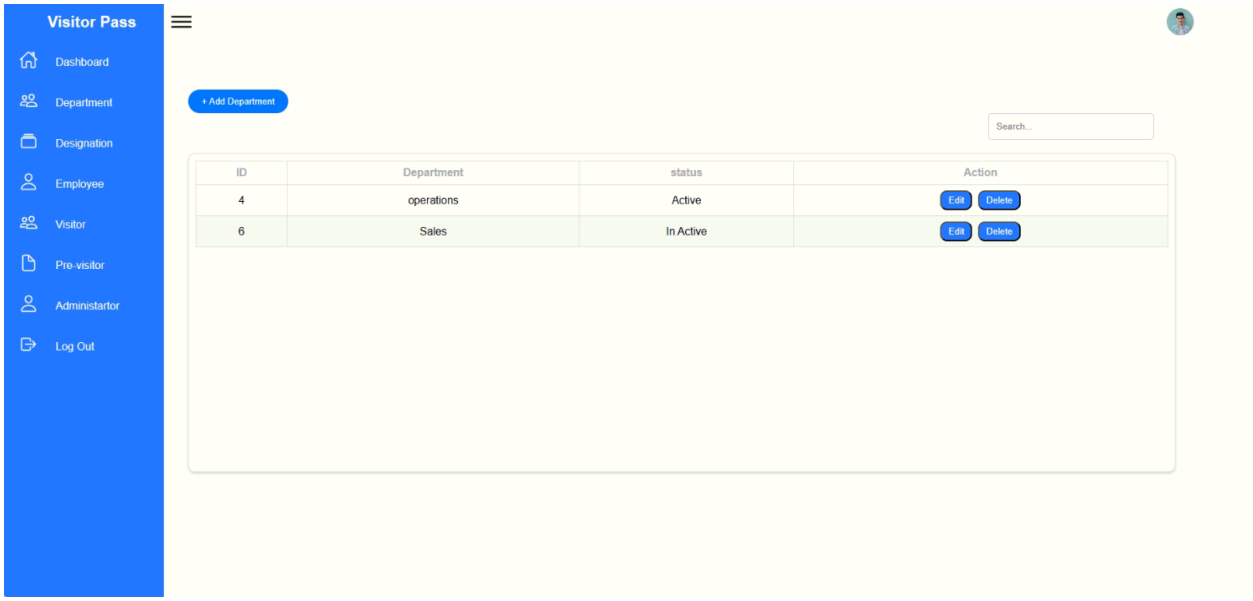
❖ Here is a Dashboard



- In the dashboard, the 'Total Visitor' metric signifies the overall count of visitors we have welcomed. Similarly, 'Today's Visitors' reflects the total number of visitors received today, 'Total Check-out' indicates the number of visitors who have completed their visit and checked out, while 'Total Check-in' signifies the count of visitors who have successfully checked in. Additionally, the 'Pre-Visitor' metric represents the number of employees who have booked appointments in advance.

- Below this, you'll find a list of approved visitors, each accompanied by a unique visitor ID. This ID specifically identifies those whose visitor requests have been successfully approved.

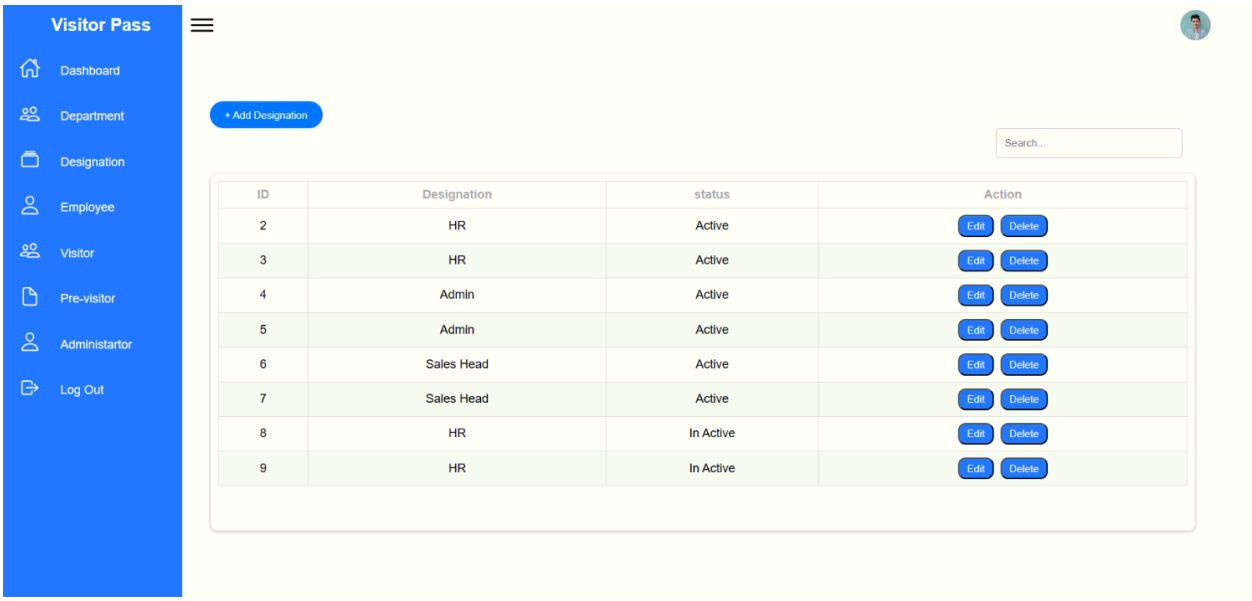
❖ Here is a Department Page.



- You can add new departments by selecting the 'Add Department' option. Below, there is a list of existing departments displayed.

- In the department list, you'll find the Department ID, Department Name, and their status, which can be either 'Active' or 'Inactive.' For each department, In Action you have the option to 'Delete' or 'Edit' it.

❖ Here is a Designation Page.



- You can add new Designation by selecting the 'Add Department' option. Below, there is a list of existing Designation displayed.

- In the department list, you'll find the Designation ID, Designation Name, and their status, which can be either 'Active' or 'Inactive.' For each designation, In Action you have the option to 'Delete' or 'Edit' it.
